

IN THE CLAIMS:

Please amend the Claims as follows, this listing of the Claims will replace all prior versions, and listings, of Claims in the application:

1. (Currently Amended) A motorized kitchen appliance, comprising:
a housing having a cylindrical outer wall with at least two recesses formed in the cylindrical outer wall and each recess defining an opening; and
a drive unit having a motor disposed within the housing and having at least two projections corresponding to said openings and, matching a shape of said openings and projecting outwardly from said drive unit and through said openings in a direction perpendicular to the vertical axis of said drive unit, the projections engaging the openings to securely mount the drive unit within the housing.
2. (Previously presented) The kitchen appliance according to Claim 1, wherein said openings have a given height, and said projections are formed of resilient elements being slightly oversized as compared to said given height for being pressed into said openings with an interference fit.
3. (Previously presented) The kitchen appliance according to Claim 1, wherein the housing further comprises a radially extending wall running in radial direction, said recesses having a recessed cylindrical wall, and said openings occupying at least part of said recessed cylindrical wall and part of said radially extending wall running in radial direction.
4. (Previously presented) The kitchen appliance according to Claim 1, wherein said drive unit has projecting lugs, and said projections include resilient elements pressed onto said projecting lugs.

5. (Original) The kitchen appliance according to Claim 1, wherein said housing has an inner diameter, said cylindrical outer wall of said housing has an inner side with a strip having a height and running in axial direction at said inner side, for insertion of said drive unit into said housing along said strip, and said drive unit has a diameter smaller than said inner diameter of said housing minus said height of said strip.

6. (Original) The kitchen appliance according to Claim 2, wherein said openings have lead-in bevels in vicinity of said cylindrical wall of said recesses, for aiding said projections entering said openings.

Claims 7-10. (Canceled)

11. (Previously Presented) The kitchen appliance according to Claim 1, further comprising a rotating element driven by said drive unit for pressing fruit.

12. (New) The kitchen appliance according to Claim 1, wherein said drive unit comprises an electric motor mounted along a central vertical axis of the appliance, having a drive shaft connected to a reduction gear for being driven by the drive shaft, and said reduction gear having said projections as part thereof and extending perpendicularly from the central vertical axis of the appliance.
